

PRESS RELEASE

LAC Med secures 7-year integrated medical imaging solutions contract of up to RM20 million with Health Capitol

- *Contract reinforces LAC Med's integrated MedTech capabilities and recurrent revenue strategy*
- *Comprehensive solution combines advanced medical technologies, systems integration, clinical applications and lifecycle support through single long-term solution*
- *Health Capitol, first private healthcare provider in Malaysia to have Spectral CT 7500*

Selangor, Malaysia, 12 October 2026 - Integrated MedTech solutions provider, LAC Med Berhad (LAC Med or the Group; Bloomberg: LACMED MK) on 10 October 2026 has secured a 7-year contract of up to RM20 million to provide integrated medical imaging solutions at Health Capitol Specialist Centre Sdn Bhd's (Health Capitol) upcoming ambulatory care centre in Petaling Jaya.

Set to launch at The Capitol landmark development, Health Capitol's ambulatory care centre of excellence occupies four levels of the development and spans over 160,000 square feet. The facility is being developed as a modern and well-equipped medical centre with a focus on clinical excellence in ambulatory care, integrating specialist consultations, advanced diagnostics, ambulatory procedures and day surgery under one roof.

Under the contract, LAC Med serves as a long-term medical technology partner, integrating advanced diagnostic imaging technologies, software and systems integration, clinical applications and training, maintenance and technical support throughout the seven-year period.

The project represents an important milestone in LAC Med's transition towards long-term, integrated medical technology partnerships, demonstrating the Group's ability to translate its recurring service strategy into commercial execution.

Following this latest contract, the Group's order book as at 30 September 2026 stood at RM230.5 million, providing financial visibility for the next seven years. Recurring income from related products and services make up 59.8% of the order book.

“This partnership with Health Capitol is significant because it demonstrates that we are able to move from concept into execution.

The strategy goes beyond providing only medical equipment, it combines comprehensive solution together with technologies, systems integration, clinical applications, training and lifecycle support into one integrated solution - capabilities LAC Med has built over more than two decades.

For Health Capitol, this means access to advanced diagnostic technologies without the conventional upfront capital burden, supported throughout the seven-year partnership. We are particularly excited about the Spectral CT 7500, which captures spectral information with every scan, giving clinicians additional diagnostic insights to support better-informed decisions and patient care.

For LAC Med, this partnership demonstrates what being an integrated MedTech solutions provider means in practice. It extends our role beyond the initial deployment of technology, builds recurring revenue over the contract lifecycle, and provides an important reference as we scale our business model with other healthcare providers.”

Mr. Liew Yoon Poh (“刘任堡”)

Group Chief Executive Officer of LAC Med Berhad

Moving from strategy to execution

LAC Med's recurring business model brings together medical technology, integration capabilities and ongoing lifecycle support under a long-term arrangement.

For LAC Med, this model extends its role beyond an initial equipment transaction into a long-term technology partnership, while building recurring revenue and greater earnings visibility over the contract period.

The model is underpinned by capabilities LAC Med has developed over more than two decades in healthcare technology. Today, the Group has an installed base of more than 2,600 units of medical equipment and supports more than 300 active clients across Malaysia's healthcare sector.

Bringing advanced diagnostic technologies together

At the heart of Health Capitol's diagnostic ecosystem will be the Spectral CT 7500, an advanced detector-based spectral CT system that captures spectral information with every scan. Health Capitol's ambulatory care centre is expected to be the **first private healthcare facility in Malaysia** to deploy the technology, bringing advanced spectral CT capabilities to Malaysia's private healthcare sector.

Unlike conventional CT imaging, the Spectral CT 7500 captures spectral information with every scan, allowing clinicians to retrospectively access and analyse additional spectral data when clinically required. This can provide further diagnostic insights from an examination already performed, potentially reducing the need for repeat scans and supporting faster, better-informed clinical decisions.

The diagnostic ecosystem will also feature an ESG-friendly MRI system designed for **helium-free operations**, using only a small quantity of permanently sealed helium compared with conventional MRI systems. This reduces reliance on helium while supporting greater operational resilience and environmental sustainability.

These technologies, together with X-ray, echocardiography and general ultrasound systems, will be integrated and supported by LAC Med as part of Health Capitol's overall diagnostic infrastructure.

Group Chief Executive Officer of LAC Med Berhad

**About LAC Med Berhad (LAC Med; the Group)**

Established in 2004, LAC Med Berhad is an integrated MedTech solutions provider serving Malaysia's public and private healthcare sectors.

The Group combines medical technologies with enterprise digital solutions, artificial intelligence, systems integration, clinical applications and technical expertise to deliver solutions across the healthcare technology lifecycle - from planning and implementation to integration, commissioning, training, maintenance and ongoing lifecycle support.

Over more than two decades, LAC Med has built a broad healthcare technology footprint, supporting more than 300 active clients and an installed base of more than 2,600 medical technology systems across Malaysia. This installed base provides a foundation for the Group to deepen customer relationships through technical services, digital solutions, AI applications, upgrades and long-term managed service models.

LAC Med's capabilities are supported by a growing portfolio of technologies from leading global MedTech companies including Philips, Samsung, Stryker, Abbott, Baxter, Bayer, LG, Epson, SwiftMR, Harrison.ai and Alpinion, enabling the Group to bring together multiple technologies into integrated solutions tailored to the clinical and operational needs of healthcare providers.
